

FORKFOX MASTER PLAN: BUSINESS PORTAL + GO-TO-MARKET + CHANNEL TACTICS

0) EXECUTIVE READ: WHAT'S GOING ON RIGHT NOW

OPERATIONAL REALITY (FROM THE CC LOGS/CONTEXT)

- ? You had a sequencing failure, not a strategy failure: social scheduling fired before OG image deploy completion.
- ? Facebook failed early because it validates image URLs at schedule-time; Pinterest tolerated deferred validation.
- ? Recovery pattern that worked: ignore unsupported Ayrshare retry/delete flows on your plan tier, and re-submit fresh posts after Vercel served '200 OK' on OG assets.
- ? Current state (per your context): 13 articles 2 channels = 26 pending scheduled posts, with lockfiles protecting against duplicate scheduling.

STRATEGIC IMPLICATION

- ? Your issue was pipeline orchestration reliability, not content-market fit.
- ? Immediate corrective product need: ****publish gating**** (only schedule once asset health checks pass) + ****idempotent scheduling ledger**** (not just lockfiles).

1) WHAT I REVIEWED ON FORKFOX.AI (AND HOW TO USE IT IN MARKETING)

POSITIONING THAT IS ALREADY STRONG

- ? Core thesis is clear and differentiated: ****"They rank restaurants. We rank what you actually eat."****
- ? Narrative consistency across homepage, algorithm section, and support copy: dish-level scoring, personalized ranking, explainability (spider chart), and city expansion.
- ? Tangible product proof: iOS beta framing, dish/city counts, clear use-case examples.

TRUST SIGNALS ALREADY PRESENT

- ? Patent-pending claim repeated.
- ? Clear privacy/support pages and plain-language data policy.
- ? Explicit no-sale/no-ad-network language in privacy copy.

GAPS TO TIGHTEN FOR GROWTH CONVERSION

1. ****Proof density gap****: Add stronger public evidence blocks (before/after restaurant outcomes, sample leaderboard deltas, retention stats).

2. **B2B bridge gap**: Consumer site says little about a restaurant-facing portal opportunity.
3. **CTA depth gap**: ?Join Beta? is clear, but follow-up journey could segment users by role (consumer vs owner/operator).
4. **Market education gap**: Explainability is strong, but onboarding should quickly teach why dish-level scoring changes owner behavior and campaign ROI.

2) PRODUCT STRATEGY FOR THE BUSINESS PORTAL (STRATEGIC INTELLIGENCE, NOT

Because scrapes are not daily, the portal should center on:

1. **Drift over tick data** (directional intelligence),
2. **Anomaly alerts** (urgent exceptions),
3. **Action modules** that convert insight into revenue (coupons, placements, social assets).

NORTH STAR OUTCOMES

- ? Increase operator retention via ?I know what improved and why.?
- ? Increase monetization via self-serve paid tools.
- ? Increase marketplace quality by rewarding high-performing dishes and operators.

3) BUILD ROADMAP BY GATE (WHAT TO BUILD THIS WEEK ? GATE 4)

GATE 1 (WEEK 1?2): MVP THAT DELIVERS IMMEDIATE UTILITY

Goal: Ship value quickly with minimal engineering risk.

BUILD THIS WEEK

1. **Command Center** (read-only intelligence + 2 actions)
 - ? Anchor Dish Health score + last refresh timestamp.
 - ? YoY momentum card from sentiment engine (e.g., +15% YoY with top driver).
 - ? ?Top 3 risk factors? and ?Top 3 strengths.?
2. **Basic Competitor Snapshot**
 - ? You vs top 3 competitors on core attributes.
 - ? Gap-to-leader metric by dish category.
3. **Quick Actions** (fast wins)
 - ? Social badge generator (3 templates).
 - ? Exportable summary (PDF/email card) for weekly ops meetings.

4. **Pipeline Hardening (must-have)**

- ? Pre-schedule asset validator (OG URL health check).
- ? Idempotent scheduling table ('post_key', platform, scheduled_at, status).
- ? Retry model that avoids unsupported endpoints.

GATE 1 ACCEPTANCE CRITERIA

- ? Owner logs in and gets 3 clear recommendations in under 30 seconds.
- ? One-click share asset exported successfully.
- ? No duplicate schedules across reruns.

GATE 2 (WEEK 3-5): REVENUE TOOLS + BETTER DIAGNOSTICS

Goal: Move from intelligence dashboard to ROI-producing workflow.

FEATURES

1. **Coupon Factory**

- ? Rules-based templates tied to score thresholds.
- ? Example: ?Free drink with any 90+ dish order.?
- ? Track redemption code + attributable lift.

2. **Placement Management (self-serve)**

- ? Eligibility checks (quality floor, review volume, policy compliance).
- ? Suggested bid ranges from category competition.

3. **Competitor Battle Map (enhanced)**

- ? 2mi / 5mi radius snapshot.
- ? ?Position held for X days? metric.
- ? Event markers (?competitor launched spring menu?).

4. **Alerting Engine v1**

- ? Anomaly-only notifications (e.g., high-risk sentiment spike).
- ? Configurable severity and channel (email/SMS/slack/webhook).

GATE 2 ACCEPTANCE CRITERIA

- ? At least one monetizable action (coupon or placement) can be launched without manual ops.
- ? Alert triage reduces ?time-to-owner-awareness? below 1 hour for critical events.

GATE 3 (WEEK 6-9): PRO INTELLIGENCE + TEAM WORKFLOWS

Goal: Make the portal sticky for multi-location operators and agencies.

FEATURES

1. ****Sentiment Deep Dive (your proprietary engine)****
 - ? Scatter plot (frequency sentiment).
 - ? Driver decomposition (?wait time down 22% drove +15% score delta?).
 - ? Theme cohorts by meal period/daypart.
2. ****Multi-location rollups****
 - ? Portfolio health view.
 - ? Location variance and top outliers.
3. ****Tasking + workflow notes****
 - ? Assign follow-ups (?Chef: improve broth consistency this week?).
 - ? Weekly summary digest with action statuses.
4. ****API/Webhook exports****
 - ? Push key metrics to BI tools / CRM / ad systems.

GATE 3 ACCEPTANCE CRITERIA

- ? Weekly owner review can run entirely from portal exports + workflows.
- ? At least 2 stakeholder roles (operator + marketer) actively use portal weekly.

GATE 4 (QUARTER 2+): OPTIMIZATION FLYWHEEL + MARKETPLACE ADVANTAGE

****Goal:**** Build defensibility and pricing power.

FEATURES

1. ****Predictive forecasts****
 - ? ?If wait-time mentions improve 10%, expected score lift = X.?
2. ****Recommendation engine for interventions****
 - ? Menu, staffing, and service suggestions ranked by impact.
3. ****Budget optimizer****
 - ? Allocation suggestions across placements, coupons, and social channels.
4. ****Benchmark network intelligence****
 - ? Anonymous category benchmarks by city/cuisine/daypart.

GATE 4 ACCEPTANCE CRITERIA

- ? Portal can attribute revenue impact to specific actions with confidence intervals.
- ? Expansion to premium/enterprise tiers justified by measurable lift.

4) WIREFRAMES BY FUNCTION AND PHASE

A) COMMAND CENTER (GATE 1)

+-----+		
ForkFox Business Portal		Last refresh: 3d
+-----+		
Anchor Dish Health: 78/100		[Trend: +4.2 vs last scrape] [Status: Stable]
YoY Sentiment: +15% (Apr 2026 vs Apr 2025)		
Primary Driver: Wait-time mentions -22%		
+-----+		
Top Strengths		Top Risks
- Noodle texture (+)		- Friday dinner noise (rising)
- Flavor consistency (+)		- Portion value complaints (+11%)
- Service friendliness (+)		- Late-night prep speed (-)
+-----+		
Quick Actions: [Generate Social Badge] [Respond to At-Risk Reviews] [Export PDF]		
+-----+		

B) COMPETITOR DASHBOARD / BATTLE MAP (GATE 1?2)

+-----+		
Competitive Position (2mi / 5mi)	Last competitive scrape: 3d	
+-----+		
You: #2 Best Ramen (held 14 days)		
Leader Gap: -6 on Meat Quality +12 on Atmosphere		
+-----+		
Radar Compare: You vs Competitor A vs Competitor B		
[Taste] [Value] [Service] [Wait Time] [Consistency]		
+-----+		
Event Feed		
- Competitor Y launched Spring Special menu		
- Competitor B ratings dipped in dinner hour		
+-----+		

C) GROWTH TOOLS HUB (GATE 2)

+-----+	
Growth Tools	

+-----+		
Coupon Factory	Placement Bidder	
Eligible: Yes (Quality 92)	Eligible: Yes (Org score 85 vs med 78)	
[Create Offer]	[Bid for Carte Placement]	
+-----+		
Badge Studio		
Templates: Modern / Minimal / Traditional / Street / Premium		
[Generate Asset Pack] [Schedule to FB/Pinterest/IG]		
+-----+		

D) SENTIMENT INTELLIGENCE LAB (GATE 3)

+-----+		
Sentiment Intelligence (Pro)		
+-----+		
Bubble Plot: Frequency vs Sentiment		
Winner: Noodle Texture (high freq, high sentiment)		
Warning: Friday Dinner Noise (rising freq, low sentiment)		
+-----+		
Driver Decomposition		
+15% YoY overall improvement due to:		
- Wait time improvements (41%)		
- Service consistency (27%)		
- Plate temperature quality (13%)		
+-----+		
Recommended Actions: [Staffing Plan] [Menu Copy Update] [Social Narrative]		
+-----+		

E) MULTI-LOCATION PORTFOLIO (GATE 3)

+-----+		
Portfolio Health: 8 locations		
+-----+		
Avg Dish Health: 81 (+3) Highest: Rittenhouse Risk: University City		
Location variance: 14 pts (target <10)		
+-----+		
Table: location health YoY risk index open tasks		
+-----+		

5) END-TO-END MARKETING STRATEGY (INTEGRATED WITH PRODUCT GATES)

BRAND NARRATIVE (SINGLE SENTENCE)

****ForkFox helps diners choose better dishes and helps restaurants improve what actually drives repeat business ? dish by dish.****

MESSAGING PILLARS

1. ****Precision over averages**** (dish-level vs restaurant stars).
2. ****Explainability**** (score anatomy, not black-box outputs).
3. ****Actionability**** (what to do next to improve).
4. ****Outcome focus**** (better dining choices + measurable operator lift).

6) CHANNEL TACTICS (WHAT TO DO BY CHANNEL)

A) OWNED CHANNELS

WEBSITE

- ? Add B2B nav entry: ?For Restaurants.?
- ? Add dual CTA fork: ?Join Beta (Diners)? vs ?Request Business Demo.?
- ? Add proof blocks: operator outcomes, sample dashboard screenshots, benchmark snippets.

EMAIL LIFECYCLE

- ? ****Diner onboarding:**** 3-email sequence (how scores work, personalized tips, invite to share).
- ? ****Operator onboarding:**** 5-email sequence (dashboard walkthrough, quick wins, first campaign template).
- ? Weekly digest: ?What changed since last scrape + what to do next.?

IN-APP

- ? Highlight ?why this changed? for every major score movement.
- ? Contextual prompts to launch coupons/badges when thresholds met.

B) SOCIAL CHANNELS

LINKEDIN (B2B AUTHORITY)

- ? 3 posts/week:
- ? Dish-vs-restaurant insight snapshots,
- ? ?Operator play of the week,?
- ? Short case breakdowns with metric deltas.

INSTAGRAM + TIKTOK (CONSUMER DISCOVERY)

- ? 4?5 short-form posts/week:
- ? Side-by-side ?same stars, different dishes,?
- ? City micro-guides,
- ? Community ?best plate under \$15? challenges.

X/TWITTER (THOUGHT LEADERSHIP + PRODUCT VELOCITY)

- ? Build-in-public threads on algorithm explainability, city launches, and data stories.
- ? Weekly founder thread: 1 market insight + 1 product update + 1 CTA.

PINTEREST (EVERGREEN INTENT)

- ? Maintain scheduled ?city dish cards,? ?budget picks,? and cuisine boards.
- ? Pair each pin with long-tail keywords and city/cuisine taxonomy.

C) PARTNERSHIPS & FIELD GROWTH

- ? Pilot with 10?20 restaurants per launch city.
- ? Co-marketing with food creators (dish challenge series by cuisine).
- ? Hospitality-tech integrations (reservation/waitlist POS-adjacent partnerships).

D) PAID ACQUISITION (AFTER BASELINE RETENTION)

- ? Small-budget experiments:
- ? Meta/IG for city-level consumer acquisition,
- ? LinkedIn lead-gen forms for operator demos,
- ? Branded search + competitor search on Google.
- ? Keep spend gated by CAC payback targets and activation metrics.

7) KPI FRAMEWORK BY GATE

GATE 1 KPIS

- ? Business portal weekly active operators (WAO).
- ? Time-to-first-insight (<30s target).
- ? Quick action conversion rate (badge export, review response).

GATE 2 KPIS

- ? Coupon launch rate + redemption lift.
- ? Placement participation rate + incremental CTR/bookings.
- ? Critical alert response time.

GATE 3 KPIS

- ? Multi-seat account retention.
- ? Action completion rate from recommendations.
- ? Lift attribution confidence for intervention categories.

GATE 4 KPIS

- ? Forecast accuracy bands.
- ? Revenue attributed to optimized spend recommendations.
- ? Expansion revenue (Pro/Enterprise).

8) IMMEDIATE 14-DAY TACTICAL SPRINT

DAYS 1?3

- ? Ship Gate 1 Command Center UI skeleton.
- ? Add post-schedule health checks and idempotency ledger.
- ? Build 3 social badge templates.

DAYS 4?7

- ? Launch competitor snapshot + basic gap analysis.
- ? Launch weekly digest email with "what changed / why / what to do".
- ? Publish first B2B landing section on site.

DAYS 8?10

- ? Pilot Coupon Factory with a rules template.
- ? Configure anomaly alerts for high-severity review clusters.

DAYS 11?14

- ? Run 5-operator pilot walkthroughs.
- ? Capture testimonials + outcome metrics.
- ? Prepare Gate 2 implementation backlog from live feedback.

9) INVESTOR/BOARD NARRATIVE (TIGHT)

1. **Problem:** Restaurant-level stars are too coarse to drive operational improvement.
2. **Insight:** Dish-level quality intelligence is more predictive of choice and repeat behavior.
3. **Product:** Consumer ranking + business intelligence portal.
4. **Moat:** Proprietary attribute graph, explainable scoring, and feedback-to-action loop.
5. **Monetization:** SaaS intelligence + placements + campaign tools.
6. **Scale path:** City expansion + multi-location operator expansion.

10) GUARDRAILS & RISKS TO MANAGE NOW

- ? Do not imply real-time when data is periodic; be explicit with freshness labels.
- ? Keep explainability readable (operators need plain language, not model jargon).
- ? Add strong QA for social asset URLs before scheduling.
- ? Ensure lockfiles are backed by persistent scheduling records to avoid ghost duplicates.

11) RECOMMENDED NEXT DELIVERABLES

1. Clickable Figma-style prototype for Gate 1 + Gate 2 screens.
2. A/B copy set for B2C vs B2B landing paths.
3. 30-day channel calendar (LinkedIn/IG/X/Pinterest).
4. Pilot sales one-pager for restaurant onboarding.
